

41. List of Non-Alphanumeric Tokens

!	+	<	[
%	,	<=]
&	-	<>	
'	.	=	~
(/	==	~=
)	/!	>	(space)
*	//	>=	(return)
*!	{	?	`
**	}	@	:
;	^	=	&=
+=	-=	*=	/=
**=			

Here is a list of the non-alphanumeric tokens used in basis. Any input character other than one of these, which is not alphanumeric, will cause an "illegal character in input" error (unless, of course, it is part of a comment).
