Motivation

This part is for dummies who are new to Data Science

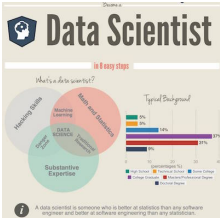

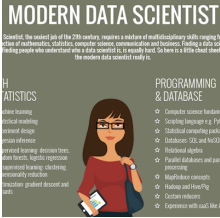

This is a shortcut path to start studying **Data Science**. Just follow the steps to answer the questions, "What is Data Science and what should I study to learn Data Science?"

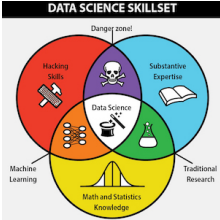

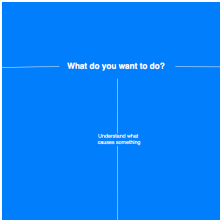

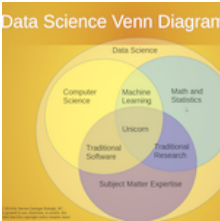

First of all, Data Science is one of the hottest topics on the Computer and Internet farmland nowadays. People have gathered data from applications and systems until today and now is the time to analyze them. The next steps are producing suggestions from the data and creating predictions about the future. [Here](#) you can find the biggest question for **Data Science** and hundreds of answers from experts. Our favorite data scientist is [Clare Corthell](#). She is an expert in data-related systems and a hacker, and has been working on a company as a data scientist. [Clare's blog](#). This web site helps you to understand the exact way to study as a professional data scientist.

Secondly, Our favorite programming language is *Python* nowadays for #DataScience. Python's - [Pandas](#) library has full functionality for collecting and analyzing data. We use [Anaconda](#) to play with data and to create applications.

This is the [Guide](#) to begin a **Data Science** project.

Toolboxes - Environment

- [Datalab from Google](#) easily explore, visualize, analyze, and transform data using familiar languages, such as Python and SQL, interactively.
- [Hortonworks Sandbox](#) is a personal, portable Hadoop environment that comes with a dozen interactive Hadoop tutorials.
- [R](#) is a free software environment for statistical computing and graphics.
- [RStudio IDE](#) – powerful user interface for R. It's free and open source, works on Windows, Mac, and Linux.
- [Python - Pandas - Anaconda](#) Completely free enterprise-ready Python distribution for large-scale data processing, predictive analytics, and scientific computing
- [Scikit-Learn](#) Machine Learning in Python
- [Data Science Toolbox](#) - Coursera Course
- [Data Science Toolbox](#) - Blog
- [Wolfram Data Science Platform](#) Take numerical, textual, image, GIS or other data and give it the Wolfram treatment, carrying out a full spectrum of data science analysis and visualization and automatically generating rich interactive reports—all powered by the revolutionary knowledge-based Wolfram Language.
- [Sense Data Science Development Platform](#) A New Cloud Platform for Data Science and Big Data Analytics Collaborate on, scale, and deploy data analysis and advanced analytics projects radically faster. Use the most powerful tools — R, Python, JavaScript, Redshift, Hive, Impala, Hadoop, and more — supercharged and integrated in the cloud.
- [Mortardata](#) Solutions, code, and devops for high-scale data science.
- [Variance](#) Build powerful data visualizations for the web without writing JavaScript
- [Kite Development Kit](#) The Kite Software Development Kit (Apache License, Version 2.0), or Kite for short, is a set of libraries, tools, examples, and documentation focused on making it easier to build systems on top of the Hadoop ecosystem.
- [Domino Data Labs](#) Run, scale, share, and deploy your models — without any infrastructure or setup.
- [Apache Flink](#) A platform for efficient, distributed, general-purpose data processing.
- [Apache Hama](#) Apache Hama is an Apache Top-Level open source project, allowing you to do advanced analytics beyond MapReduce.
- [Weka](#) Weka is a collection of machine learning algorithms for data mining tasks.
- [Octave](#) GNU Octave is a high-level interpreted language, primarily intended for numerical computations. (Free Matlab)
- [Apache Spark](#) Lightning-fast cluster computing
- [Caffe](#) Deep Learning Framework
- [Torch](#) A SCIENTIFIC COMPUTING FRAMEWORK FOR LUAJIT
- [Nervana's python based Deep Learning Framework](#)
- [Aerosolve](#) - A machine learning package built for humans.
- [Intel framework](#) - Intel® Deep Learning Framework
- [Datawrapper](#) – An open source data visualization platform helping everyone to create simple, correct and embeddable charts. Also at [github.com](#)
- [Tensor Flow](#) - TensorFlow is an Open Source Software Library for Machine Intelligence
- [Natural Language Toolkit](#)
- [nlp-toolkit for node.js](#)
- [Julia](#) – high-level, high-performance dynamic programming language for technical computing.
- [IJulia](#) – a Julia-language backend combined with the Jupyter interactive environment.
